

Impugnature ergonomiche con scorrimento completamente su cuscinetti a sfera.  
Ergonomic handle that slides completely on ball bearings.

Taglio di tutti gli spessori senza necessità di regolazione.  
Cutting of all thicknesses without the need for adjustment.

Guide di scorrimento, molto robuste per una incisione perfettamente rettilinea.  
Sliding guides, very sturdy for perfect straight cutting.

Predisposizione per montaggio LASER di posizionamento (Disponibile 08/2023)  
Predisposition for LASER guide. (Available 08 / 2023)

Barra metrica con angolazione e misurazione sempre vicina all'operatore.  
Metric bar with angle and measurement always close to the operator.

Barra metrica fulcrata su perno di acciaio in centro alla linea di taglio, orientabile +45° 0° - 45°.  
Measurement bar pivoted on a steel pin at the centre of the cutting line, swivelling +45° 0° - 45°.

La struttura in alluminio, ottenuta da una unica fusione per massima robustezza e leggerezza.

The aluminum structure, obtained from a single fusion for maximum strength and lightness.

Valigie con ruote.

Case with wheels.

Tappetino magnetico antiscivolo per taglio mosaico.

Non-slip magnetic mat for mosaic cut.

**NEW**

Tasto regolabile, per il posizionamento rapido della barra metrica alle angolazioni più usate.

Adjustable stop for quick positioning of metric bar to the angles most commonly used.

Righetta metrica con misura del lato e della diagonale

Metric scale with side and diagonal measure.

Lungo squadretto di appoggio posizionabile vicino alla linea di taglio.

Long support square that can be positioned close to the cutting line.

Ingombro ridotto per il trasporto.  
Reduced volume for transport.

Supporti molleggiati, apribili per il sostegno di grandi piastrelle.  
Spring-loaded support brackets, which can be opened to support large tiles.

Contenitore per ricambio rotella di incisione.  
Spare scoring wheel compartment.

Misura anteriore 410 - 0 - 410 mm  
Front measure 410 - 0 - 410 mm

Prolunga per barra metrica orientabile fissabile alla estremità destra o sinistra.  
Extension for adjustable metric bar fixable at the right or left end.

La rotella è disponibile anche nella versione rivestita TIN per una maggiore durata

The scoring wheel is also available with a TIN coat for longer life span.

Impugnatura di forma ergonomica, specifica per incisione a trazione.

Ergonomic handle, specific for pull scoring.

Piede di spacco largo 100mm.

100mm large splitting foot.

L'impugnatura è accoppiata al carrello di scorrimento con due cuscinetti reggispinta a sfere, per la massima precisione.

The handle is coupled to the sliding carriage with two thrust bearing ball bearings, for maximum precision.

Protezione antisegno intercambiabile dotata di ammortizzatore di fine incisione.

Interchangeable stain-free protection with shock absorber at the end of the scoring.

Compensatore automatico in acciaio per la regolazione del precarico di scorrimento del carrello sulla guida.

Automatic steel compensator for the adjustment of the sliding preload of the carriage on the guide.

Un sistema automatico tiene sollevata l'impugnatura per favorire l'inserimento della piastrella.

An automatic system holds the handle raised to ease the positioning of the tile.

Il carrello di scorrimento dell'impugnatura è privo di usura, grazie a 3 cuscinetti a doppia corona di sfere che garantiscono precisione nel tempo, senza necessità di manutenzione.

The sliding carriage of the handle is wear-free, thanks to 3 double crown ball bearings that guarantee precision over time, without the need for maintenance.

Ottima visibilità della rotella di incisione.

Excellent visibility of the scoring wheel.

Scavo portarotella fresato CNC e guscio in metallo antifrizione per eliminare attriti e usura laterale della rotella di incisione.

CNC milled wheel holder, roller bearing and anti-friction metal shell to erase friction and lateral wear of the scoring wheel.

Art. 4BU cm.70

Art. 4CU cm.84

Art. 4DU cm.103

Lo scorrimento dei cuscinetti dell'impugnatura sulla guida, causerà gradualmente la rimozione del trattamento galvanico sulla pista di contatto. **Nessun problema**, è un effetto previsto e gestito dal **compensatore automatico integrato**. Utilizzando un feltro abrasivo tipo Scotch-Brite lubrificato con olio WD-40 / Svitol, alla fine di ogni giornata lavorativa, la pista si adatterà perfettamente ai cuscinetti dell'impugnatura e sarà protetta dall'ossidazione.

The movement of the handle's bearings on the guide will gradually cause the removal of the galvanic treatment on the contact track. **Have no fear**, this is an expected effect and is managed by the **integrated automatic compensator**. By using a Scotch-Brite type abrasive felt lubricated with WD-40 / Svitol oil, at the end of each working day, the raceway will fit the carriage bearings perfectly and be protected from oxidation.

Le glissement des roulements à billes de la poignée sur la guide va progressivement faire disparaître le traitement galvanique sur la piste de contact. **Pas de problème**, c'est un effet attendu et géré par le **compensateur automatique intégré**. En utilisant un feutre abrasif de type Scotch-Brite, lubrifié avec de l'huile WD-40 / Svitol, à la fin de chaque journée de travail, le chemin de roulement s'adaptera parfaitement aux roulements du chariot et sera protégé de l'oxydation.

Durch das Laufen der Handgriffskugellager auf der Schiene wird die galvanische Behandlung der Kontaktbahn allmählich entfernt. **Kein Problem**, das ist ein zu erwartender Effekt und wird durch eine **integrierte automatische Kompensationsanlage geregelt**. Durch die Verwendung eines Scotch-Brite-Schleiffilzes, der mit WD-40/Svitol-Öl geschmiert wird, am Ende eines jeden Arbeitstages, wird die Laufbahn perfekt auf die Wagenlager passen und vor Oxidation geschützt sein.

Per controllare lo squadra della barra goniometrica, stringere la barra a 90° e con una squadra verificare eventuali anomalie; se presenti andare al punto B.

To check the angle of the swivel measurement bar, tighten the bar at 90° and check with a square for anomalies; if present go to point B.

Pour vérifier l'angle de la barre métrique, serrer la barre à 90° et vérifier les anomalies en utilisant une équerre; s'il y en a, passez au point B.

Zur Überprüfung der Rechtwinkligkeit des goniometrischen Stabes, Ziehen Sie die Stange im Winkel von 90° an und prüfen Sie mit einem Winkel auf Anomalien. Auf Anomalien prüfen; falls vorhanden, mit Punkt B fortfahren.

Con barra a 90° allentare il pomolo (1), inserire una chiave esagonale da 4 mm nel foro del perno (2) tenendo spinto verso il basso, allentare con una chiave da 17 mm il dado/pulsante esagonale (3). Tenendo spinto verso il basso ruotare la chiave esagonale da 4 mm per correggere il fuori squadra. Una volta corretto stringere il dado/pulsante esagonale da 17.

With the bar at 90°, loosen the knob (1), insert a 4 mm hex wrench into the hole in the pin (2) while pushing down, loosen with a 17 mm wrench the hex nut / button (3). Keep pushing down and turn the 4 mm hex wrench to correct the out of square. Once correct, tighten the 17 nut.

Avec la barre à 90°, desserrer le bouton (1), insérer une clé hexagonale de 4 mm dans le trou de la goupille (2) en le poussant vers le bas; desserrer l'écrou/bouton hexagonal (3) avec une clé de 17 mm. En le poussant vers le bas, tourner la clé hexagonale de 4 mm pour corriger un déséquilibre. lorsque c'est correct, serrez l'écrou/bouton hexagonal.

Stange auf 90° stellen, Knopf (1) lösen, einsetzen einen 4 mm Inbusschlüssel in das Loch im Stift (2), nach unten drücken, mit einem 17 mm Schraubenschlüssel lösen die Sechskantmutter / den Knopf (3). Halten Sie gedrückt und drehen Sie den 4-mm-Inbusschlüssel zur Korrektur. Wenn alles in Ordnung ist, ziehen Sie die 17 mm Mutter / den Knopf fest.

## Dansk

### FLISESKÆRER - BRUGSANVISNING

danese

Fliseskærere velegnet til skæring af:

Dobbelt brændte fliser, Klinker, Porcelæn fliser, Stentøj, Tyndt marmor  
Skæresystem TRÆK / UP: Træk-skæring til hurtige og præcise snit.  
Skæresystem SKUB - MAX / Klick-Klock / NEX: for en let skæring af særligt tykke materialer, og/eller skæring af materialer med en besværlig overflade.

FORSKÆRING (for bestemte typer af porcelæn fliser der er svære at skære):

Gentag snittet frem og tilbage i den samme skærende linje 4 eller flere gange.

Du vil kunne høre, at støjen fra snittet ændrer sig i takt med at porcelæns overfladen bliver brudt.

Husk, at det er meget vigtigt:

1. at de gentagne snit går hele vejen fra kant til kant af flisen. Det er især vigtigt at der er skåret i den første og sidste del af flisen.

2. at flisen ikke bevæger sig under skæringen, til dette formål tilrådes det at anvende sidelandet.

3 hold den smalle side af flisen hævet, mens du graver meget store fliser) for at forhindre, at vægten forårsager et tidligt brud

KNÆKNING AF FLISEN: Placer håndtagets knækanordning på flisen 1,5 cm fra kanten, og tryk med en passende kraft, indtil flisen er knækket. På modeller hvor der ikke er mulighed for regulering af tykkelse, anbefales det at dosere trykket, for at skåne både maskine og flise.

Hvis der ønskes at skære tynde stykker flise, er det bedst først at skære et stykke i dobbelt størrelse, for derefter at opdele den i halve (f.eks. skære et stykke på 3 cm for at få to stykker på 1,5 cm.).

Hvis flisen ikke knækker perfekt, vendes den på hovedet, og skæreprcessen gentages på bagsiden af flisen.

VELLIGEHOLDELSE: Hold stål glideskinnen ren. Alle bevægelige dele skal periodevis smøres; og hvis det er nødvendigt at stramme skruen der holder skærehjulet (A) for at fjerne eventuel slør. Efter en vis tids brug, vil skæringerne blive mindre præcise. Noget af denne præcision kan genoprettes ved at stramme skrue (B) eller udskifte håndtaget.

5 ÅRS GARANTI: Garantien dækker alle fabriksfejl, med undtagelse af transport og shipping.

Garantien omfatter ikke skader forårsaget af ukorrekt brug, overbelastning, brug der ikke er i overensstemmelse med instruktionerne eller almindelig slitage. Reparationer udført af uautoriseret personale medføre automatisk tab af garanti. For hver reklamation er det absolut nødvendigt at have en kopi af købsfakturaen. Enhver reparation skal udføres på autoriseret værksted.

## Português

### INSTRUÇÕES PARA USAR O CORTADOR DE CERÂMICA

MÁQUINAS PARA CORTAR LADRILHOS DE:

CERÂMICA (BICOZEDURA E MONOZEDURA), GRÉS PORCELÂNICO, CLÍNQUER, TIJOLO COZIDO, MÁRMORE FINO.

SISTEMA DE CORTE POR TRAÇÃO / UP: Empunhadura por tração para cortes rápidos.

SISTEMA DE CORTE DO TIPO A EMPURRAR MAX / KLICK-KLOCK / NEX: permite facilmente cortes profundos em materiais de grande espessura também com superfície em relevo.

CORTE (para especiais tipos de ladrilhos em grés porcelânico, difíceis de cortar):

Repetir o corte passando na mesma linha 4 ou mais vezes.

Será possível notar que o ruído do corte passa de uma tonalidade típica de um corte no esmalte a uma tonalidade típica de corte no tijolo cozido.

Lembramos que é muito importante:

1) Um mimo cuidado com que repetido cortes vêm em ambos o bordo de ataque dessa extremidade do ladrilho, especialmente nos primeiros e últimos 10 cm da linha gravada).

2) que o ladrilho não seja deslocado durante os cortes; para este propósito recomenda-se o uso do esquadro).

3) mantenha o lado estreito do ladrilho levantado, enquanto grava ladrilhos muito grandes, para evitar que o peso cause uma quebra precoce

RUPTURA: Apoiar os pés da empunhadura do ladrilho à distância de cm.1,5 da borda, portanto, bater firmemente na empunhadura até obter o corte. Nos modelos desprovidos de registro de regulagem de espessura é aconselhável bater na empunhadura gradualmente para que não afunde demais na fase de ruptura. Se quiserem obter partes finas dos ladrilhos, recomenda-se cortar antes uma parte dupla a dividir pela metade em seguida (p.ex. cortar cm 3 para obter duas peças de cm 1,5).

Se na fase de ruptura o ladrilho não for dividido perfeitamente, invertê-lo, cortá-lo e quebrá-lo na parte abaixo.

MANUTENÇÃO: Manter a guia de aço correctamente limpa. Lubrificar periodicamente: a guia de aço, o disco de corte com um lubrificante fluido; e, se for necessário, apertar o apropriado parafuso (A) para eliminar eventuais movimentos laterais. Será possível observar ao longo do tempo uma diminuição da precisão de corte: este defeito será devido ao desgaste da empunhadura. É possível uma parcial recuperação do desgaste, apertando os parafusos (B) ou substituir a empunhadura.

GARANTIA 5 ANOS: A garantia cobre todos os defeitos de fabrico, à exceção do transporte e das despesas de expedição. Estão excluídas avarias devido a um uso impróprio das máquinas, a sobrecarga, a um uso não conforme com as instruções ou ao normal desgaste. Reparações executadas por pessoal não especializado implicam uma automática perda da garantia. Para cada reclamação é absolutamente necessário ter uma fotocópia do documento de compra. Cada eventual devolução do produto para a sua substituição deve ser antes autorizada pelo fabricante.

## Elliniká

### ΟΔΗΓΙΕΣ ΓΙΑ ΤΗ ΧΡΗΣΗ ΤΟΥ ΚΡΟΥΣΙΟΥ ΠΙΝΑΚΑ greco

ΜΗΧΑΝΗΜΑΤΑ ΓΙΑ ΤΗΝ ΚΟΠΗ ΠΛΑΣΤΙΚΩΝ ΑΠΟ:

ΔΙΠΛΟ ΚΑΤΕΡΓΑΣΙΑ, ΜΟΝΟ ΠΕΤΡΙΝΟ, ΠΟΡΤΟΚΑΛΙ ΠΕΤΡΕΛΑΙΟ, ΚΛΙΝΚΕΡ, ΤΕΡΑΚΑΤΤΑ, ΘΑΝ ΜΑΡΜΑΡΑ

ΣΥΣΤΗΜΑ ΚΑΘΑΡΙΣΜΟΥ ΕΛΑΣΜΑΤΟΣ / UP: λαβή έλξης για γρήγορες περικοπές.

MAX / KLICK-KLOCK / NEX ΣΥΣΤΗΜΑ ΚΑΘΑΡΙΣΜΟΥ ΠΙΕΣΗΣ: επιπρέπει εύκολα βαθιά χαρακτηριστικά σε παχιά υλικά ακόμα και με ανυψωμένη επιφάνεια.

ΕΓΚΑΤΑΣΤΑΣΗ (για συγκεκριμένους τύπους κεραμιδιών πορσελάνης που είναι δύσκολο να κοπούν):

Επαναλάβετε την τομή και περνάτε από την ίδια γραμμή κοπής 4 ή περισσότερες φορές.

Θα σημειωθεί ότι ο θόρυβος της τομής περνάει από μια τυπική απόχρωση μιας τομής πάνω στο σμάλτο, σε μια τυπική απόχρωση της τομής σε τερακότα.

Θυμηθείτε ότι είναι πολύ σημαντικό:

(1 βεβαιωθείτε ότι οι επαναλαμβανόμενες τομές φθάνουν τόσο στην αρχική όσο και στην τελική άκρη του κεραμιδιού, ειδικά στα πρώτα και τελευταία 10 εκατοστά της κοπιασμένης γραμμής).

(2 ότι το πλακίδιο δεν μετακινείται κατά τη διάρκεια των τομών, γι 'αυτό το λόγο συνιστάται η χρήση του βραχίονα.)

(3 κρατήστε τη στενή πλευρά του κεραμιδιού που σκάνεται, όταν χαράζετε πολύ μεγάλα πλακάκια, για να εμποδίσετε το βάρος να προκαλέσει πρόωρη θραύση

ΔΙΑΚΟΠΗ: Ξεκουράστε τα πόδια της λαβής. στο πλακίδιο σε απόσταση cm. 1,5 από την άκρη, στη συνέχεια χτυπήστε σταθερά τη χειρολαβή μέχρι να επιτευχθεί η τομή. Σε μοντέλα χωρίς καταχωρητή πάχους, συνιστάται να διοχετεύετε το χτύπημα στη λαβή έτσι ώστε να μην βυθίζεται πάρα πολύ στη φάση θραύσης. Εάν θέλετε να αποκτήσετε λεπτά τεμάχια των πλακιδίων, συνιστάται πρώτα να κόψετε ένα διπλό κομμάτι που πρέπει να χωριστεί στο μισό (π.χ. κόψτε 3 cm για να αποκτήσετε δύο τεμάχια 1,5 cm).

Εάν κατά τη θραύση το κεραμίδι δεν χωρίζει τέλεια, γυρίστε το ανάποδα, κόψτε το και σπάστε το από κάτω

ΣΥΝΤΗΡΗΣΗ: Κρατήστε το χαλύβδινο οδηγό καθαρό. Περιοδικά λάδι: ο χάλυβας οδηγός, ο τροχός χάραξης με υγρό λιπαντικό και εάν είναι απαραίτητο σφίξτε την κατάλληλη βίδα Α για να εξαλείψετε τυχόν πλευρική αναπαράγνση. Με την πάροδο του χρόνου θα παρατηρήσετε μείωση στην ακρίβεια κοπής, αυτό το ελάττωμα θα οφείλεται στη φθορά της λαβής. είναι δυνατή η μερική ανάκτηση της φθοράς, σφίγγοντας τις βίδες Α και Β ή αντικαθιστώντας τη λαβή.

5 ΕΤΗ ΕΓΓΥΗΣΗ: Η εγγύηση καλύπτει όλα τα κατασκευαστικά ελαττώματα, εξαιρουμένων των εξόδων μεταφοράς και αποστολής. Αποκλείονται οι βλάβες που οφείλονται σε εσφαλμένη χρήση των μηχανών, υπερφόρτωση, χρήση που δεν συμμορφώνεται με τις οδηγίες ή την κανονική κατανάλωση. Οι επισκευές που πραγματοποιούνται από μη εξουσιοδοτημένο προσωπικό οδηγούν σε αυτόματη απώλεια της εγγύησης. Για κάθε καταγγελία είναι απολύτως απαραίτητο να υπάρχει φωτοαντίγραφο του εγγράφου αγοράς. Οποιαδήποτε επιστροφή για αντικατάσταση πρέπει πρώτα να εγκριθεί από το σπίτι.
